

CASE *ii*

DX SERIES FARMALL® TRACTORS

A Real Revolution...

FARMALL is one of the most familiar—and famous—names in tractor history, representing a beloved brand that's become an industry icon. In 1923, the FARMALL nameplate debuted on a line of utility tractors that had universal appeal by focusing on flexibility to handle multiple duties around the farm.

Then...

And now!

Original 2-plow-rated FARMALL tractors didn't have model names until 1931 when the F-30 debuted as a 3-plow tractor.

The mini-but-mighty FARMALL Cub tractors built by the Louisville (Kentucky) Works factory starting in 1947 were the essence of versatility and eventually evolved into highly respected mowing machines.

Case IH has had a long history with hydrostatic transmissions that dates back to 1955. The industry's first hydrostatic all-speed drive tractor was the FARMALL 656 introduced in 1967. That same year, the Model 123 debuted with hydrostatic drive — an industry-first for lawn and garden equipment.

But this isn't your grandfather's FARMALL! While the name encompasses its rugged roots from the farm, the full FARMALL tractor family of today has evolved into multi-tasking machines for owners involved in a wide variety of operations. These tractors aren't just for farms anymore!

Today, Case IH revisits those time-honored truths by introducing a new tractor line that will reinvent the first FARMALL brand. The all-new **DX Series FARMALL tractor** family includes 10 models ranging from 31 to 60 engine horsepower in convenient compacts and full-featured utility tractors.

Real. Reliable. Rugged. Respected.

If these words describe the type of tractor you'd want to own, stop by your local Case IH dealership to ask for advice on which DX Series FARMALL tractor best suits you.

TABLE OF CONTENTS

To help you match the right model to your operation and the tasks on your to-do list, you'll find the tractors and implements in a broad range of applications, tackling a wide variety of jobs — from homeowners who have large acreage, to commercial-grade contractors digging on a building site. Depending on the size of your work environment and the extent of your workload, there's a DX Series FARMALL tractor made just for you!

Farmall Family	4-5
Operator's Environment	6-7
Estate Owners	8-9
Horse Stables & Grounds Maintenance	10-11
Landscapers/Contractors	12-13
Farmers	14-15
Integrated Implements/Attachments	16-17
Loaders/Specifications	18-19

From The Farm To The Fairways

There's a new DX Series FARMALL tractor to tackle your long list of chores...from odd jobs around the farm to mowing the fairways at the golf course.

With one of the 10 models ranging from 31 to 60 horsepower, there's a FARMALL tractor for every need — from homeowner-friendly lawn-mowing machines to full-fledged multi-tasking farm utility tractors. It's a long way from the standard "lawn and garden" line!

Adaptability to any task is what makes these machines unique. With a smart "system solutions" approach that closely matches implements and tractors together as a team, Case IH equipment exceeds expectations for satisfaction. It's this very concept of implement integration that created the overwhelming demand for the first FARMALL tractors...and will have the same effect with the new DX Series tractors today!

Case IH simplified the naming system for DX Series tractor models. The number in the name is the model's rated engine horsepower.

Case IH DX40 and DX45 FARMALL compact tractors are available with a factory-installed cab, making you productive and comfortable in any environment. From sunny-day mowing to dusty leaf blowing and windy-weather snow-blowing, these multi-tasking machines keep you dry and comfortable so you can finish chores in a hurry. The Farmall cab features two wide-opening doors, a rear opening window and high-visibility roof panel for outstanding visibility. Other standard features include heat, air conditioning, a deluxe cloth covered seat, front windshield wiper and washer, worklights to both front and rear, and much more.

DEDICATED DEALERSHIPS

There are many things that set the DX FARMALL tractors apart from the rest. But one of the most important is the support you'll get from your Case IH dealer with full time dedication to the equipment business. Case IH knows what matters before, during and after the sale — full-service support from a single source for in-stock parts, skilled service, and flexible financing.

Just stop in to visit with the knowledgeable equipment experts at your local Case IH dealership. They'll help you determine the right tractor model and equip it with the options and implements you need to handle everything from odd jobs to big jobs...and all those chores in between! They'll best match a model to your budget and can provide financing through CNH Capital to make owning a new FARMALL even easier.

Case IH dealers know that jobs aren't always finished by 5 pm on Friday. They're there to help get you back to your chores quickly — whether they're on the farm or around the house!

Folding ROPS

Feel at Home and at Ease

That's how comfortable and confident you'll feel sitting on a DX Series FARMALL tractor. Discover how these user-friendly tractors make operating enjoyable, even when you're hard at work!

The open deck and step-through platform give your legs and feet plenty of floorspace for getting comfortable.

Deluxe open deck and step-through models feature a high-back, contoured seat that's adjustable and swivels to either side so you can watch your work area with rear-mounted implements. You can even add arm rests for the ultimate in comfort. Find your own perfect fit with the infinitely tilting and telescoping steering wheel.

Feel at ease at the wheel. The instrument panel's analog gauges and warning lights are simple to read and within plain view. The controls are easy to reach and run, even if you didn't grow up on a farm.

Sunshade

FOPS canopy

Options for the Operator

When equipped with the hydrostatic transmission, a DX Series tractor gives you clutch-free convenience and infinitely variable speeds. Simply use the foot pedals to choose your direction of travel. If all-day mowing jobs are on your agenda, push-button cruise control is a welcome addition to hydrostatic models.

Or choose a mechanical gear transmission available on certain models — either a 9x3 sliding gear or a 12x12 synchronized shuttle. The DX55 and DX60 MFD tractor is available with a 12x12 electro-hydraulic clutchless power shuttle for faster cycle times with a loader.

All models feature rugged mechanical front-wheel drive (MFD) that gets you through slippery spots and loose soil or sand with 50% less wheel slip. Hydrostatic power steering and wet-disc brakes make operating the tractor feel as familiar as your other vehicles.

The FARMALL tractor is designed with you in mind! The sleek styling of the sloped hood improves visibility for maneuvering around obstacles, making these tractors very agile in small spaces. High-capacity hydraulics, 3-point hitch, and mid- or rear-mount PTO give you plenty of options for greater productivity on every project.

Case IH 3- and 4-cylinder diesel engines provide continuous, dependable power for the most demanding situations. Their parent bore design with deep skirt and ribbed engine block ensure rugged, dependable performance.

For your safety, retractable seat belts and ROPS (Roll Over Protection Structure) are standard equipment. Add a FOPS (Falling Object Protection Structure) canopy, sunshade, or a soft cab to keep the elements at bay. And an operator presence system shuts down the engine if you leave the seat of the tractor without putting the transmission in neutral or locking the brakes.

An ergonomic design is what makes the DX Series FARMALL tractors so easy to operate. Instrumentation is easy to view and understand. Controls are placed within easy reach of the operator's hands and their functions are clearly labeled.

SIMPLE SERVICEABILITY

Because there are never enough hours in a day when there's work to be done, Case IH designed the DX Series FARMALL tractors for simple serviceability. You'll save valuable time with fast, easy access to routine service points. You can check engine oil without opening the hood or removing side panels. You can even add engine oil without using a funnel. And when you need to get under the hood, it tilts open for full access to the engine, radiator, air cleaner, and more.

A Lifestyle, a Love, a Lot to Do

You love the lifestyle but realize it leaves you with a lot to do. With your acreage and all that comes with it, your evenings and weekends may be as nonstop as your workweek. But that doesn't mean you can't have fun, even if it involves work!

Ideal for large estate owners looking for a hard-working handyman, the DX31 and DX34 FARMALL tractors with 31 and 35 engine hp, MFD, and hydrostatic transmission. A 9x3 gear transmission is available on the DX31.

Chances are, your lawn is too large to be called a yard any more. Take 5- or 6-foot passes with a mid-mount mower or rear finishing mower to get the job done in a timely fashion so you can get on to other projects.

If the snow piles up high at your place, hook up to a front- or rear-mounted snowblower to settle the score drift by drift all the way down that long driveway. A front Quick-Attach subframe system lets you switch back and forth from a front-mounted snowblower to a blade to a rotary broom, saving time and money.

If you measure by acres instead of feet, you deserve a mowing machine that can cut your acreage down to size in short order.

When equipped with a mid-mount mower or rear finishing mower in 60-, 72-, or 84-inch working widths, you won't believe how fast you'll get over your grass. FARMALL tractors are built commercial-grade to handle more hard work than a traditional lawn-and-garden machine.

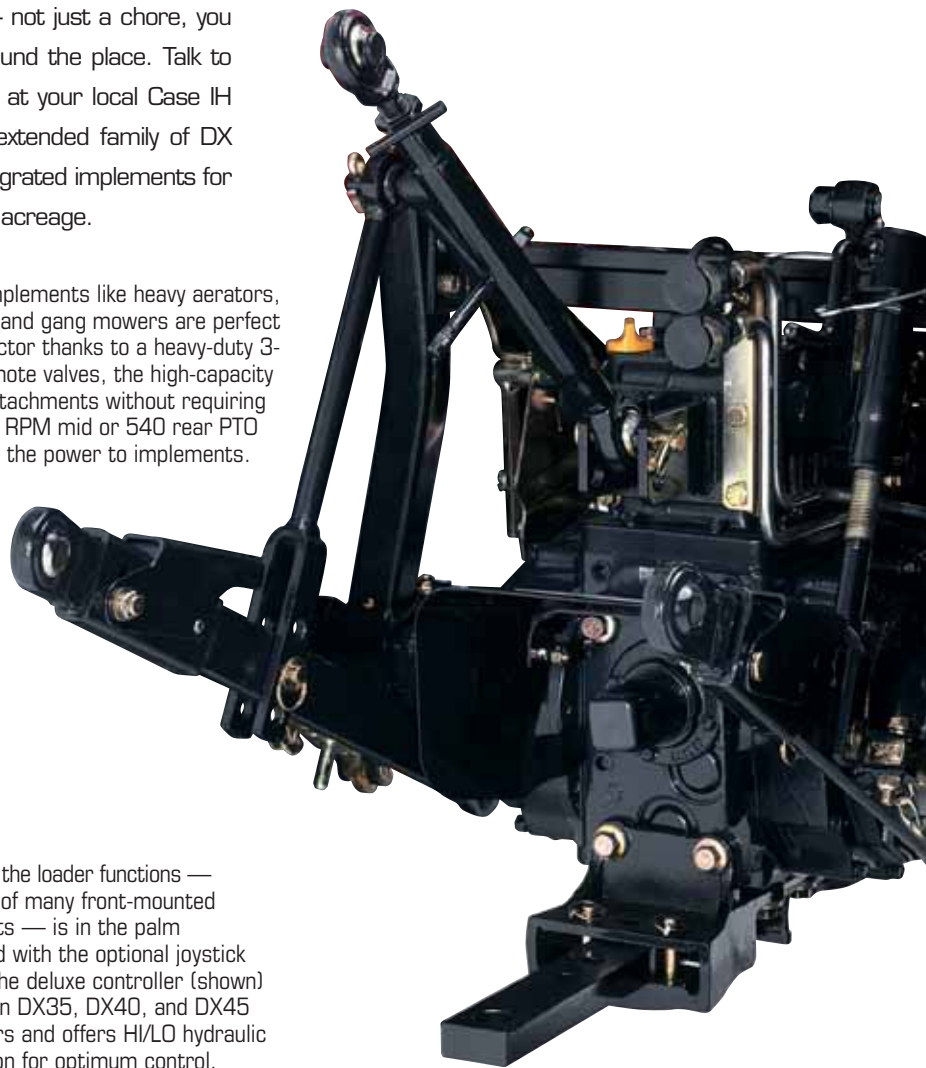

Both the loader and the backhoe built for these compact tractors are as rugged as the larger versions used by full-time farm and construction customers.

When work is a way of life — not just a chore, you need an assistant to help out around the place. Talk to the friendly, knowledgeable people at your local Case IH dealership for full details on the extended family of DX Series FARMALL tractors and integrated implements for multi-tasking maintenance on your acreage.

Specialized rear-mounted implements like heavy aerators, fertilizer spreaders, sprayers and gang mowers are perfect partners for a DX Series tractor thanks to a heavy-duty 3-point hitch. With rear remote valves, the high-capacity hydraulic system handles attachments without requiring an auxiliary pump. A 2000 RPM mid or 540 rear PTO provides the power to implements.

Control of the loader functions — and those of many front-mounted attachments — is in the palm of your hand with the optional joystick controller. The deluxe controller (shown) is available on DX35, DX40, and DX45 model tractors and offers HI/LO hydraulic speed selection for optimum control.

RENTAL-READY AND ALWAYS IN DEMAND

It makes perfect sense that multi-purpose machines will always be in demand. Because you can serve more customer needs with a single model, a DX Series FARMALL tractor is a true leader in the rental business. Weekend warriors and commercial contractors alike appreciate the DX Series tractor line with its long list of integrated implements and available attachments.

Consider adding a DX31 or DX34 to the rental fleet, but don't expect to see it sitting in the yard for long. Both come as MFD models with a hydrostatic transmission or a 9x3 gear transmission on the DX31.

The front Quick-Attach subframe is available for all front-mounted implements like the broom, blade and snowblower. It's this level of versatility that ensures a multi-tool, multi-day rental. Maneuverable mid-mount mowers are ideal for inexperienced operators because they can keep a close eye on the cutting edge and still get close to landscaping or buildings. From front-mounted loaders to rear mounted mowers, snowblowers, tillers or utility backhoes, the DX Series tractor line can tackle just about any task renters will ask for.

What's more, DX Series tractors are very easy to operate and simple to understand, making the transition to work as soon as they're unloaded on location. Best of all, these tractors are tough — rugged enough to work reliably no matter how hard they're handled by a range of renters. Your local Case IH dealer has all the details on these DX Series FARMALL tractors.

Rein In Rugged And Reliable

Whether you keep a few horses as a hobby or a full stable as a boarder or breeder, a DX Series FARMALL tractor is well-suited for working in stables and stalls, as well as pastures and paddocks. Quiet and gentle around animals, a DX Series FARMALL tractor is at ease working on a ranch, at riding stables, and in a show or sale barn.

A DX34 or DX35 tractor is ideal for everything from manure handling to pasture maintenance, as well as upkeep chores like fencing, maintaining arena footing, and clearing debris.

Maneuverable enough for manure handling chores inside buildings, an agile DX Series tractor lets you get through gates and down barn aisles. A foldable ROPS temporarily lowers clearance requirements. The optional FOPS canopy offers an added level of operator protection when lifting bales and other loads.

DX34 with FOPS canopy and LX340 loader

Great Grounds Care...Everywhere

Grounds care maintenance may seem like an endless job...from mowing grass in the summer to blowing snow in the winter. Keeping things tidy can be a tough task when Mother Nature only gives you more work. A DX Series FARMALL tractor from Case IH can help you stay ahead of your all-season workload.

Whether your property management includes a parking lot or a park, school or shopping mall, a D/DX35, D/DX40, or D/DX45 tractor is ready to work on whatever, whenever. DX models feature MFD and a hydrostatic transmission.

Sweep leaves and blow snow from store parking lots and school sidewalks with a front-mounted rotary broom and a rear-mounted 2-stage snowblower. Move playground equipment at the city park with an LX350 loader. Mow quietly around hospital buildings with a mid-mount mower or rear finishing mower. Low sound levels and emissions make these machines ideal for working around people in a city environment.

Mowing maintenance won't take as much time with a mid- or rear-mounted mower on a DX FARMALL tractor. Both implements can be attached or removed quickly and easily, yet are rugged enough to reliably mow more acres all year long.

Make quick work of snow removal with a front- or rear-mounted snowblower on a DX FARMALL tractor.

When budgets and bids are critical to the bottom line, look to an economical and efficient DX Series tractor with its 3- or 4-cylinder diesel engine to finish jobs faster on less fuel.

These machines are a reliable addition to any fleet, requiring minimal maintenance and offering simplified serviceability.

Give Your Business a Growth Spurt

Nothing rivals the demanding, do-it-all diversity needed by a landscape professional. Depending on your primary tasks and size of workspace, you'll find a D/DX35, D/DX40 or D/DX45 FARMALL tractor to match your nursery needs.

For lifting larger loads of up to 3,465 lb. (1573 kg) at the 3-point hitch, step up to the 55- or 60-hp DX55 or DX60 FARMALL utility tractor. The 12x12 synchro shuttle shift transmission is standard, with an optional 12x12 power shuttle to provide clutch-free changes of direction that speed up cycle times with loader work.

Mounting and removing rear implements is a snap with the flexible link ends, telescoping stabilizers, a swinging drawbar and crank-style leveling adjustment.

No matter which model and available attachments you put through the paces, every one of these tough tractors and integrated implements can handle all-purpose projects with greater productivity.

Attach the optional BHX1114 backhoe that can be mounted on the tractor along with a loader or front blade.

The industry-leading curved boom design offers unbelievable visibility as well as greater strength with less weight than traditional dog-leg loader types. The 4-bar linkage gives greater dump and rollback angles for fuller filling and easier emptying.

When you work into the evening to meet your customer's deadline, the lighting package on the DX Series FARMALL tractor will illuminate the way. Add optional working lights to increase visibility to rear mounted attachments.

The front blade puts pushing power up front where it's easier to see and manage when backfilling trenches or doing light dozing work in gravel, sand or snow. The single-lever hydraulic joystick (optional) controls blade height and angle. An 84-inch blade in the angled position covers the wheel tracks.

Build Your Business With the Best

Commercial contractors in the construction, electrical and plumbing industries demand dependability from heavy-duty equipment for efficient, economical performance. That's why many contracting professionals choose Case IH equipment.

Ideal for doing dirty work in cramped quarters on the jobsite, agile DX Series FARMALL tractors and highly adaptable attachments help handle a wider range of projects with greater productivity. The top-of-the-line DX55 and DX60 tractor is a 55- and 60 hp MFD model with a 12x12 power shuttle transmission. When paired with an LX360 loader and BHX1114 backhoe, this tractor team can tackle work from either end.

A durable DX55 or DX60 MFD synchro shuttle shift tractor may also suit your specific situation so talk to your local Case IH dealer today about which model would best build your business. Because bids and budgets are an important part of your industry, your local Case IH dealer can fit a financing program to your bottom line with flexible options through CNH Capital.

Take your time spent on the job to a higher level of efficiency today. Visit your local Case IH dealership for full details on the extended family of DX Series FARMALL tractors with integrated implements built to better your business.

The first FARMALL tractors weren't painted International Harvester trademark red. The bright red paint started in November 1936 as a safety measure because an estimated nine out of ten all-purpose tractors in the field were "battleship gray" FARMALL models. This significant decision brought on the association of "Big Red" for IHC.

Excellent in Every Environment

Versatility for farmstead work is what made the first FARMALL tractors legendary. And it's what puts the new DX Series FARMALL models ahead of the competition with a long list of industry-leading advantages.

Thanks to integrated implements that easily attach to the tractor, you can quickly switch between jobs during the day. Many of the available attachments are compatible with each other so you can keep the equipment you use most often mounted and ready to run.

For Your Farm

While the new FARMALL family includes a wide range of models from 31 to 60 horsepower, farmers looking for the ultimate utility tractor should select one of the two largest models — DX55 or DX60. Depending on the size of your farming operation, one of these 55- and 60-hp machines will make the perfect primary tractor or an ideal auxiliary tractor.

Maybe you have a herd of beef or dairy cattle, so manure handling and hay hauling are top tasks on your to-do list. Perhaps you run an orchard, vineyard or even pumpkin patch and need to mow, haul in the harvest, and fix fence. Whatever you're handling, a DX55 or DX60 tractor delivers the power and performance you need, with the reliability you expect from Case IH equipment.

A DX55 or DX60 tractor provides 3,465 lb. (1573 kg) lift capacity at the Category I/II 3-point hitch and 2,500 lb. (908 kg) lift with the LX360 front loader. That's plenty of power and performance to boost your daily productivity.

Best of all, these large-chassis FARMALL utility tractors are built as tough as their bigger brothers, including MAGNUM™ and STEIGER® tractors that impress the industry with numerous best-in-class features. Your local Case IH dealer can tell you more about these rugged models at the higher-horsepower end of the DX Series FARMALL family.

Integrated Implements — Ready for Anything...and Everything

The ability to adapt to any task was what made the first FARMALL tractors so popular. And that's exactly what draws operators to the DX Series FARMALL tractors of today.

With well-matched implements, these tractors can tackle more diverse, demanding jobs. Case IH believes in a systems approach of designing tractors and implements as productive partners, teaming them together for superior performance.

Compatible with a long list of available attachments and integrated implements, DX Series FARMALL tractors offer added value from versatility paired with visibility. This gives you all-season success — mowing in the summer, blowing snow all winter, sweeping leaves in the fall, and tilling garden seedbeds in the spring.

The true test of a tractor is how it handles hydraulic demands of attachments like a loader or backhoe. With high-capacity live hydraulics delivering an instant response and total flow of up to 17.5 gpm, the dedicated system can power demanding implements without using an auxiliary pump.

In addition to an LX Series loader, front-mounted implements include a blade, rotary broom, and snowblower. An available front Quick-Attach subframe simplifies swapping attachments in minutes — no tools and no helpers needed. And rear mounted and mid-mount PTOs allow you to run mowers, snowblowers, brooms, and more.

A heavy-duty 3-point hitch handles the heavy lifting of rear-mounted implements, including a snowblower, tiller, and rear finishing mower. For fast rear implement attachment, telescoping stabilizers are standard equipment on most DX FARMALL tractors. On all deluxe models, the 3-point hitch features flexible link ends as standard equipment, plus a crank-operated leveling adjustment so attaching implements is quick and convenient. In fact, it only takes one person to hook up attachments.

LX Series Loaders

Unlike competitive loader designs, the curved boom arms of an LX Series loader don't compromise visibility or service access. The innovative design provides greater strength with less weight compared to traditional dog-leg designs. The mid-mount loader is fully compatible with mid-mount mowers and front-mounted blades or snowblowers.

Built tough to take the twisting forces of heavy-duty loader work, LX Series loaders use industrial-style cast reinforcements and a large torque tube. Lubing the loader is simple thanks to rifle-barrel grease zerks that can be reached easily without raising loader arms or dumping the bucket.

For easy operation and faster cycle times, the loader control lever is conveniently located to the right of the steering wheel or nestled into the right fender, depending on the model.

LX Series loaders feature high lift capacity of up to 2,500 lbs. (1135 kg) at the pins at full height on utility models to lift larger loads higher.

The standard Quick-Latch system means you can mount and remove the loader in minutes without extra hands or tools. Quickly change attachments — buckets, manure fork, pallet fork, or bale spear — as needed with the optional Quick-Attach face plate. A grille guard or bolt-on bucket cutting edge is also available.

A 4-bar linkage gives greater rollback for better bucket filling and material retention at travel height. It also results in a greater dump angle for complete cleanout — a huge help with sticky material.

* The DX40 and DX45 models are available from the factory with cab.

Standard cab features include:

- Air conditioning and heat
- 2 wide-opening doors
- High-visibility roof panel
- Deluxe cloth covered seat with mechanical suspension
- Controls mounted on left and right consoles
- Tilt and telescoping steering column
- Front windshield wiper and washer
- 2 front and 2 rear work lights
- 2 external mounted mirrors
- Interior rear-view mirror
- Sunvisor
- Radio-ready – prewired w/two speakers
- Cup holder
- 12-volt power outlet
- Suspended brake pedals
- Two pedal control for hydrostatic transmission
- Monitor cable access in rear of cab
- Toolbox
- LH and RH steps
